meme.cooking

About

meme.cooking is a NEAR-based decentralized launchpad revolutionizing the world of meme creation and token distribution. We offer an innovative platform where creators (chefs) can launch their meme-based tokens, and supporters (diners) can participate in these launches, all while enjoying fair, transparent, and rewarding participation.

Problems

The current crypto landscape, especially in meme token creation, suffers from issues such as rug pulls, inequitable token distribution, and a lack of trust in new projects. Existing launchpads often prioritize early investors, leaving small contributors at a disadvantage and vulnerable to market manipulation.

meme.cooking

Solutions

FAIR TOKEN DISTRIBUTION

We ensure that all participants have equal opportunities to invest and engage in meme token launches.

NO RUG PULLS

Our system is designed to prevent token creators (chefs) from rugging buyers. The platform's smart contract locks in mechanisms that protect investors' funds.

0% DRAWDOWN PRE-DEX SYSTEM:

This feature allows users to exit their positions without financial losses if a token doesn't go live on a decentralized exchange (DEX), offering a risk-free participation model.

REFUND MECHANISM

If a project doesn't meet its funding goals, users get a refund, ensuring they never lose their entire investment on unlaunched projects.

meme.cooking

Key Features

Staking-based Price Model

The price of tokens launched on meme.cooking is determined through a staking model, which rewards early engagement and participation.

Auction-based Launches

We use auctions to provide transparent and dynamic price discovery, allowing the market to dictate token value fairly

Soft Cap and Hard Cap

Users can set configurable soft and hard caps, providing flexibility and ensuring smooth project launches.

- **Soft Cap: The minimum required to guarantee a launch on Ref Finance (e.g., 100 NEAR).**

- **Hard Cap: If the hard cap is reached, it triggers an immediate launch, bypassing waiting periods.**

meme.cooking

Earn Revenue

- **Referral System**: Users earn 50% of the protocol fee from referred participants, while the platform retains the other half.

Example

If someone uses your referral link to deposit 10N into a meme token launch, the standard protocol fee of 0.5% applies.
Thanks to your link, the protocol earns 0.25% (0.025N), and you also receive 0.25% (0.025N) as your reward. Simple and effective!

meme.cooking

Earn Revenue

- **Withdrawal Fees**: A 2% fee is applied to users who withdraw before the launch period ends, benefiting both depositors and the platform.

  Example

  If someone uses your referral link to deposit 10N into a meme token launch, the standard protocol fee of 0.5% applies.

  Thanks to your link, the protocol earns 0.25% (0.025N), and you also receive 0.25% (0.025N) as your reward. Simple and effective!
